

THE CITY OF CASPER WANTS TO REMIND YOU THAT:

Shoveling or pushing snow into the street or the gutter can create hazardous driving conditions. Instead of shoveling the snow into the street from driveways, parking lots and sidewalks, it should be deposited onto the lawn or landscaping of the property from where it came or shoveled onto the private property so as not to block sidewalks and/or driveway/parking lot entrances.

- Due to constant and excessive winds in Casper, snow that has been shoveled into the street can form drifts which may cause streets to become slick or impassable;
- Additional snow that has been placed into the street often times does not melt as fast which contributes to hazardous and icy driving conditions;
- Blowing and drifting snow piled in the street creates poor visibility and can turn into hard packed snow banks that present a hazard to vehicles and emergency responders as they try to maneuver up and down a street;
- Snow that is shoveled into the street can block driveways and creates other winter hazards for individuals trying to maneuver up and down the street;
- Snow that is plowed by City crews into wind rows allows individuals to maneuver up and down a street. However, additional snow that is piled into the street and/or wind row after it has previously been plowed creates difficulties for City crews trying to keep those roads open and accessible.

For more information, contact the City of Casper Community Development Department, Code Enforcement Division at 235-8254 or via the web at: www.casperwy.gov. Let's all work together to ensure that your neighborhood is a cleaner and safer place to live, work and play.
